

GENERAL NOTES

- 1 This report is provided for sole use by the Client named on the front cover of this report and is confidential to them and their professional advisors. No responsibility whatsoever for the contents of this report will be accepted to any person other than the named Client.
- 2 This report is provided under the terms of the brief and its objectives. Information on subsurface conditions is provided in the context of the stated development proposals and should not be used in a different context. Furthermore, new information, improved practices and new legislation may necessitate an alteration to the report in whole or in part after its submission. Therefore with any change or circumstances or after expiry of one year from the date of the report, the report should be referred to us for re-assessment and if necessary re-appraisal.
- 3 Where data available from previous site investigation reports, supplied by the Client or obtained from BGS and Landmark Information Group have been used it has been assumed that the information is correct. PB Ltd can accept no responsibility for inaccuracies within the data supplied.
- 4 The accuracy of map extracts presented in this report cannot be guaranteed and it should be recognised that different conditions may have existed between and subsequent to the various map surveys.
- 5 The exploratory hole locations provided in the report were generally established by taping techniques from existing boundary or salient site features at the time of the original investigation. Unless otherwise stated, hole locations are not accurately surveyed and ground levels at these locations are not obtained unless specifically requested.
- 6 Whilst the report may express an opinion on possible configurations of strata between or beyond trial pit or borehole locations, or on the possible presence of features based on visual, verbal or published evidence this is for guidance only and no liability can be accepted for its accuracy. There may also be special conditions appertaining to the site, which have not been revealed by the investigation and which have not, therefore, been taken into account in the report. In addition, there is also the possibility of sudden variations in ground conditions occurring between exploratory hole positions.
- 7 It should also be noted that groundwater levels may vary due to seasonal or other effects and may at times be significantly different to those observed during the investigation.
- 8 The term 'TOPSOIL' is used in this report to describe the surface, usually organic, layer including turf, subsoil, weathered material with roots etc and should not be taken to imply agricultural soil suitable for re-use.
- 9 The copyright of this report and other plans and documents prepared by PB Ltd is owned by them and no such report, plan or document maybe reproduced, published or adapted without their written consent. Complete copies of the report may however be made and distributed by the Client as an expedient in dealing with the matters related to its commission.
